

# Piers Heath

Founding Director

BEng (Hons)

# Environmental & Mechanical Engineer

In a career spanning over 25 years Piers has developed an international reputation as a pioneer of sustainable design and engineering.

He is well known for his 'hands-on' approach to assisting clients, architects and project teams in defining and then achieving their sustainability objectives.

On each project Piers applies his analytical and engineering skills to exploit all available 'passive' opportunities presented by a site and its microclimate, to minimise dependence on 'active' building services systems. He then works with his team to integrate sustainable 'active' systems that have been shown to enhance occupant comfort and minimise resource consumption.

Piers' professional experience working with leading consultants covers a broad range of projects at all scales including masterplans, commercial offices, headquarters and government buildings, educational and sports facilities, residential and mixed-use developments and internationally acclaimed arts buildings.

Prior to co-founding PHA Consult, Piers was Engineering Design Director of a leading sustainable MEP consultancy.

## Selected Project Experience

### Endesa Headquarters, Spain

Lead MEP Engineer

### Winspear Opera House, Dallas

MEP Design Director

### Almaty Masterplan, Kazakhstan

Sitewide Sustainable Infrastructure

### Jameson House, Vancouver

MEP Design Director

### Smithsonian Institution, Washington, U.S.

Sustainable Engineering Director

### New Home Office, London

Lead MEP Engineer
